STATE OF WEST VIRGINIA

Department of Revenue... State Tax Department

Craig A. Griffith

2017 JUN State Tax Commissioner

OFFICE WEST VINGINIA SECRETARY OF STATE

June 29, 2012

The Honorable Natalie Tennant Secretary of State Building 1, Suite 157-K State Capitol Charleston, West Virginia 25305

Earl Ray Tomblin

Governor

Dear Secretary Tennant:

Attached are tentative natural resource property valuation variables for the 2013 Tax Year that have been developed by the State Tax Department for use in appraising coal, oil, natural gas, managed timberland and other natural resource properties for ad valorem tax purposes.

The State Tax Department will accept written public comments on all variables until August 1, 2012. Final valuation variables will be filed on or before September 1, 2012.

Public comments concerning the attached variables should be forwarded to the following address:

> West Virginia State Tax Department Property Tax Division Attention: Jeff Amburgey P.O. Box 2389 Charleston, West Virginia 25328-2389

> > Sincerely,

Chaig A. Griffith

State Tax Commissioner

OIL AND GAS PROPERTIES ANALYSIS

Tax Year 2013

June 29, 2012 Craig A. Griffith State Tax Commissioner Department of Revenue

OIL AND GAS

TY 2013

Capitalization Rate Analysis and Results:

January

In developing a capitalization rate for use in valuing specific income-producing properties consideration is given to the three approaches generally employed in estimating a discount rate. As a matter of practicality, the Bands-of -Investment and Summation Technique approaches are utilized in establishing discount rates for producing oil and gas properties. Data for analysis has been derived in accordance with current Legislative Rule Title 110, Series 1J.

Safe Rate (3-Month Constant Maturity Interest Rates) 0.053% 2011 December January (Interest differential between Loan Rate and 3-Month Constant Maturity Interest Rates) Risk Rate Risk Rate Loan Rate* 2011 5.250% 5.197% *Prime plus 2% (Differential between Equity Rates and 3-Month Constant Maturity Interest Rates) Equity Equity Rate** Risk Rate 2011 [12.0%/(1-.37)]-0.053% 18.995% ** Value Line Investment Survey Analysis Loan and Equity Rates weighted by industry estimated capital structure. Composite Risk Rate **Equity Rate** Debt Rate Composite Risk 2011 12.3465% 1.819% 14.911% Note: Debt equity Ratio Debt 35% Equity 65% *** Effective severance tax adjustment 0.95 Non Liquidity Rate Interest differential between 3-month Constant Maturity Interest Rates and a 1 year Constant Maturity Interest Rates which reflects a reasonable time necessary to sell active property. 1yr T Bill 90 day T Bill Non Liquidity Rate 0.053% 2011 0.182% 0.129% January December Charges for the management of investment portfolios. **Management Rate** 0.500% Fixed Rate (by Rule) **Property Tax Rate** Sixty percent (60%) of State average Class III property tax rate. 1.314% 2011 60% of 2.19 Inflation Rate 3.000% December 2011

Capitalization Rate

Since the valuation of oil and gas property is predicated on a three year production, the capitalization rate will be considered in a similar manner.

	<u>2011</u>	<u>2010</u>	2009	
Inflation Rate	-3.000%	-1.500%	-2.700%	
Safe Rate	0.053%	0.137%	0.150%

^{*} New Formation(s) involved in recent production. These will be valued with the Exception rates until decline information is available.

Industry Operating Expense Survey and Results

This component was determined through a review of responses to a survey distributed by the State Tax Department to producers of all oil and natural gas wells producing in West Virginia and through use of other market data. The survey requested working costs for the 2007 calendar year producing wells.

GAS

_	% Working Interest Expenses		
	for Typical Producing Well	-	30%
_	Maximum Operating Expenses	===	\$5,000
_	Coal Bed Methane, Vertical Wells		
	Expenses	=	\$9,000
-	Marcellus Wells		
	Expenses	=	\$30,000

OIL

- % Working Interest Expenses		
for Typical Producing Well	=	35%
- Maximum Operating Expenses		\$5,750
- Maximum Enhanced Operating		
Expenses	-	\$9,000

Minimum Working Interest Appraisal = \$500 per well

Flat Rate Royalty Multiplier = 5.75

Home Use Only Wells: Appraised at \$500 per well

Industrial Use Only Wells:* MCF usage X \$ 3.95/MCF BBL usage X \$94.88/BBL

^{*(}Also includes Department of Environmental Protection reported wells.)

Non-Filer Valuations

Working Interest = 150% of previous year's appraisal Royalty Interest = 90% of previous year's appraisal

Valuation

The previously discussed variables are used to establish a future income stream converted to present worth through application of a capitalization rate. The sum of the discounted future net income per year represents a reasonable estimate of market value.

Lease Rate/Term Survey and Results

The non-producing property value for each county is determined by multiplying the average delay rental by a factor, which represents the average lease term under present economic conditions.

As a result of higher lease terms being inversely proportional to the value of oil and gas (thus counties with little leasing or production activities reflect inflated values) and with the volatile nature of county activity, necessary adjustments in the review have been made.

A compilation of lease terms produced a statewide average of 5 years. This term (5 years) was applied to all county lease rates and compared to the appraisal rates derived from calculations using individual county data. The two resulting calculations were reviewed and considered in the assignment of an appraisal rate per acre.

The appraisal rate/acre amounts shown on the next page are preliminary figures, which may change if additional lease data is received. These rates have been applied to all county magisterial districts with either producing wells, lease activity within the past 5 years or both. Tax districts void of activity within the past 5 years have been assigned the minimum value per acre.

COAL PROPERTIES ANALYSIS

Tax Year 2013

June 29, 2012 Craig A. Griffith State Tax Commissioner Department of Revenue

COAL CAPITALIZATION RATE

Capitalization Rate Analysis and Results:

In developing a capitalization rate for use in valuing specific income-producing properties consideration is given to the three approaches generally employed in estimating a discount rate. As a matter of practicality, the Bands-of -Investment and Summation Technique approaches are utilized in establishing discount rates for active coal. Data for analysis has been derived in accordance with current Legislative Rule Title 110, Series 1I.

COAL

Price and Royalty Rate Analysis

The development of royalty rates for the various categories of mines and markets involves information collection and review from a variety of sources. Research data for coal lease rates have been derived from recorded lease transactions provided by county assessors, tax auditors, producers, and by individual lessors/lessees involved in the specific transaction. The prices for mined coal have been calculated from data published in Platt's "COAL Outlook", from pricing information provided by producers as part of the most recent tax filling, and from data obtained from the WV Public Service Commission and U.S. Energy Information Administration concerning power plant fuel purchases. Because a large portion of the data used in this analysis is, by law, considered confidential, only a summary of the results are published.

Explanation of Reserve Coal Valuation

The RCVM consists of a computer model, which utilizes a database consisting of coal beds and characteristics, property locations, mine locations, sales, transportation, etc., for the entire state. An extensive algorithm calculates in-place tonnage, expected time of mining and present value for all the mineable coal on every property.

There are, therefore, no set "rates" available on reserve coal under the Rule. The RCVM values on each property will not be available until all data has been entered, after November 15 of each year. Please refer to the State Register, Legislative Rules, Title 110, Series 1I for details of the process.

Title 110, Series 1I Valuation of Active and Reserve Coal Property for Ad Valorem Property Tax Purposes

The above Legislative Rule was modified during the 2005 Legislative Session requiring biannual (every two years) updating of the geostatistical basis for several valuation factors used in the Reserve Coal Valuation Model. To satisfy that requirement, maps and data files concerning coal BTU values, coal Sulfur values, coal Ash values, coal Volatility values, the Market Interest Factor, the Market Mineability Factor, the Use Confected Factor and the Environmental Factor have been revised for Tax Year 2013. Additionally, preliminary research has been conducted to determine the effects of the factors on coal valuation. The results are as follows:

Market Interest Factor

This is the relationship between transactions (sales, leases, prospects, permit applications, etc.) and mining as it relates to properties and locations. Trans_Ct is the number of transactions counted within the radius.

Radius = 5 miles

If Trans_Ct >= 12 Then TransFactor = 20

If Trans_Ct < 12 And Trans_Ct >= 4 Then TransFactor = 40

Else TransFactor = 80

Market Mineability Factor

This is the relationship between property location and mining, through time. Determining feature is count of mines within the radius.

Radius = 5 miles

Surface Mines: Smine

Deep Mines: Dmine

Boom Mines: Bmine

Historic Mines: Omine

Current Mines: Cmine

To assign MineFactor:

If Cmine > 0 Then MineFactor = 20

If Cmine = 0 And (Omine > 0 Or Bmine > 0) Then MineFactor= 40

Else MineFactor = 80

Use Conflict Factor

This is the relationship between oil & gas well drilling and mining as it relates to property location. Well density is in wells per square mile.

WellDensity < 7 Then WellFactor = 0

WellDensity >= 7 And WellDensity < 19 Then WellFactor = 20

WellDensity >= 19 And WellDensity < 29 Then WellFactor = 40

WellDensity > 29 Then WellFactor = 80

Environmental Factor

This is the relationship of known environmental hazards and impediments to the likelihood of mining occurring at this location.

The rates are compiled from maps and represent densities of problems mapped.

Envrate = <=30 and Null Then EnvFactor = 0

Envrate >30 and Envrate <= 60 Then EnvFactor = 20

Envrate > 60 and Envrate < 100 Then EnvFactor = 40

Envrate >= 100 Then EnvFactor = 80

OTHER MINED MINERALS

ROYALTY RATE SURVEY

The determination of royalty rates for other mined minerals within the state of West Virginia is dependent upon the availability of leasehold information. Since this information is limited, the Department has chosen to review data for the most recent thirty year period. A summary only of this review is shown below in order to protect the confidentiality of parties involved.

	DATA	AVERAGE	MEDIAN	TY2013
